As to the particular experiments that are of most interest and importance in this field, of course opinions would differ. Every one who works in psychology soon finds himself attracted in special directions, and on the whole it is perhaps well for a writer to respect this element of personal affinity. But in preparing the book, I have aimed to present, as best I could within somewhat narrow limits, the character and value of the laboratory psychology, especially as bearing upon our moral and philosophical interests. In this way the book is planned to occupy a different field from that already so well covered by the excellent works of Titchener, Sanford, and Scripture. Considerable attention has thus been given to the interpretation of the experimental results, - to their more immediate scientific meaning, as well as to what they suggest for life and for speculation.
